Office Action Summary

DETAILED ACTION

Election/Restriction

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-5 are, drawn to a method for the thermal treatment of metallic workpieces, classified in class 148, subclass 660+.
 - II. Claims 6-16 are, drawn to an apparatus for the thermal treatment of metallic workpieces, classified in class 266, subclass 251+.
2. The inventions are distinct, each from the other because:

Inventions I and II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the process as claimed can be practiced by another materially different apparatus such as quenching with liquid N₂, water, or oil.
3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
4. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination

purposes as indicated is proper.

5. During a telephone conversation with Mr. Robert W. Becker, Esq. on September 24, 2002 a provisional election was made with traverse to prosecute the invention of Group II, claims 6-16. Affirmation of this election must be made by applicant in replying to this Office action. Claims 1-5 are withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to a non-elected invention.

6. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(I).

Claim Rejections - 35 USC § 103

7. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

8. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered

therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(f) or (g) prior art under 35 U.S.C. 103(a).

9. Claims 6-16 are rejected under 35 U.S.C. § 103 as being unpatentable over USP 4653732 to Wunning et al.

10. The Wunning disclose(s) the features including the claimed quenching chamber, quenching gas, and quenching gas guide channels (see col. 5, lines 3-14).

Figure 5 shows the nozzle box (18) is constructed in tunnel/channel shape which has a U-shaped cross-section (col. 5, lines 4-6). The channel has a height projects beyond individual or stacked workpieces (see Fig. 5 and 9) so that workpiece could be loaded in said channel (col. 6, lines 42-48). The nozzle plates (20, 20a) that formed channels can be inserted selectively and interchanged (col. 5, lines 9-14). The difference between the reference(s) and the claims are as follows: Wunning does not disclose the material of the guide channels. But, since the apparatus is for heat treating metallic materials at high temperatures; therefore, it is within ambit of ordinary skill artisan to form such channels with high temperature materials such as steel.

Conclusion

Applicant is reminded that when amendment and/or revision is required, applicant should therefore specifically point out the support for any amendments made to the disclosure. See MPEP § 2163.06 (a) and 37 C.F.R. § 1.119.
